	SUB MENU	SUB MENU	DESCRIPTION
EDGE DET		ON/OFF	Edge detection allows you to easily adjust focus.
	BRIGHTNESS	0~20	Adjust the screen brightness. The bright control function adjusts gain, to keep a brightness level.
		AUTO	Shutter controls exposure automatically. Shutter control has the exposure control priority
	SHUTTER	MANUAL	Shutter speed is fixed. The exposure control priority is given to other resources.
EXPOEURE		FLICKER	Use this function when you experience picture flicker, this happens when there is a conflict with the installed lighting frequency.
	SENS-UP(DSS-Digital slow shutter)	OFF, X2~64	When luminance condition is low, SENS-UP can adjust the picture quality by maintaining the light level. Minimum slow shutter limit is down to x64.
	AGC	0~20	A function which controls the amplification/gain process automatically if the illumination falls under the usable level. Camera raises up gain to selected gain limit when dark conditions.
BACKLIGHT	HLC		Highlight the bright area with a masking box with a selected color. Adjust the masking level (0~20).
	BLC		Enable a back light compensation feature.
	WDR (FRAME / ROI WDR)		Enable user to view both object and background more clearly when background is too bright. (LOW, MIDDLE, HIGH).
			AUTO : Auto mode allows to switch between COLOR and B&W automatically depending on day and night.
	MODE	AUTO / COLOR /	COLOR : The camera keeps color mode constantly.
	MODE	B&W / EXTERN	B&W : The camera keeps black/white mode constantly.
	IR LED(OPTION)	OFF/FULL	EXTERN : In case illuminance sensor is mounted, you can switch between COLOR and B&W by its signal.(OPTION) You can modulate brightness level of externally mounted IR LED.
	ANTI-SAT(OPTION)	0720	
DAY&NIGHT	EXTREN SW(OPTION)	LOW/HIGH	In case external IR LED is used, saturated image by light can be decreased by level. In case external illuminance sensor is mounted, you can match COLOR and B&W by level of its signal.
	D>N THRES N>D THRES	0~20	You can modulate illuminance point from DAY to NIGHT. You can modulate illuminance point from NIGHT to DAY.
	N>D THRES	0-20	Select the checking time of light condition to confirm to change from the day mode to the night mode.
	DELAY	LOW/MIDDLE/HIGH	Select the the charge line of a line of the charge from the day mode to part mode the negative from the set of the select the the select in order to avoid hunting.
	AWB		AUTO : Color temperature is automatically adjusted to 3,000°K ~ 8,000°K
		AUTO/AUTOext/	AUTOext : Continuously adjusts camera color balance in accordance with any change in color temperature. Compensates for color temperature changes within the range of 1,900K to 11,000K.
COLOR		PRESET/MANUAL	PRESET : Color temperature will be manually adjusted by pushing the OSD button. Place the white paper in front of the camera when OSD button is pressed to obtain the optimum result. Manual : Select color temperature from 3000°K, 5000°K or 8000°K.
	COLOR GAIN	0~20	Adjust the color level value for a fine color tune.
DNR	LOW/MIDDLE/HIGH	0 20	Aujust the Color lever value for a line color take. This feature will reduce the video nise at low ambient light.
DINK	SHARPNESS	0~10	Adjust the sharpness of the image. As you increase this value, the picture outline becomes stronger and clearer.
	GAMMA	0.45 ~ 0.75	This feature will adjust video output brightness (0.45 ~ 0.75).
	MIRROR	ON/OFF	This restore win adjust view output originatess (0.4.7 0.7.5). Video output is rotated horizontally.
	FLIP	ON/OFF	Video output is rotated vertically.
	D-ZOOM	1.0X ~ 16.0X	Enlarge digitally the video output up to 16X.
		ON/OFF	Range : This function will reduce image blurriness due to vibrations caused by hand shake.
	DIS		The image will be digitally zoomed in to compensate the shifted pixels. Set the digital zoom level for image stabilizing. (Max. 30% : x1.4 Digital Zoom)
IMAGE			FILTER : Select the level of correction hold filter for the worst case of image. HIGH: Less image correction. Low: More image correction.
			AUTO C - OFF: Disable the auto centering function. FULL: The camera will correct the blurriness due to vibrations caused by both hand shake.
			HALF: The camera will correct the blurriness due to vibrations caused by hand shake.
	ACE	OFF/LOW/MIDDLE/HIGH	Brightness correction of the dark image area.
	DEFOG		Auto : This feature will help increase visibility in extreme weather conditions, such as fog, rain or in a very strong luminous intensity.
			Auto : This feature will help increase visibility in extreme weather conditions, such as log, fail of in a very strong familious intensity.
		ON/OFF	Manual : Set the level of defogging function (LOW, MIDDLE, HIGH).
	SHADING	ON/OFF	Manual : Set the level of defogging function (LOW, MIDDLE, HIGH). This feature will correct the inconsistent brightness level in the image.
